Quality is our Most Important Company Goal

Electro Industries believes that quality is our MOST IMPORTANT company goal. To achieve our goal, we provide a multipoint approach to quality. EIG uses advanced standards, starting from the purchasing of components to the final shipping of the products, to insure that our instruments are free of defects when shipped and will operate for typically 25 or more years in service.

In-Process Environmental Testing and 100% Inspection

EIG meters utilize namebrand, industrial temperature components. They receive 100% component insertion inspection, automated computer controlled testing, temperature deviation-based accelerated life burn-in testing and extensive 2.5 KV dielectric testing. We strive to achieve low failure rates using quality design and comprehensive quality based manufacturing techniques.

EIG: The Leader in Web Accessed Power Monitoring

Power professionals world-wide rely on EIG products for their power monitoring and communication applications. EIG equipment continues to prove itself robust and trustworthy in harsh field environments. Our products have revolutionized the power monitoring industry by providing high performance power analysis at economical costs. EIG employs many meter scientists and engineers to design and test our quality products. We back all our products by our four year warranty.

Total Quality Mission

EIG is committed to upholding the highest standards of reliability and sophistication demanded by the electrical power industry. Our Total Quality Mission continues to reduce EIG's already low return rate. Our Engineering and Manufacturing teams consistently review all procedures and techniques, looking for ways to reduce component failure and increase product life span.

Manufacturing Quality Products Since 1973

Our years of quality manufacturing experience and customer satisfaction have made EIG a world leader in the design and production of power monitoring equipment. We are confident you will find an EIG product to suit your utility, industrial, or power generation applications. If you require additional information, please contact our application engineers or your local EIG representative.
