06 July 2006

SUBJECT: New Power Wizard Control Panel Features

Introduction:

Easier use of "Event Reset" features.

Previously in order to clear a fault at least 5 key presses were required. The operator also required a knowledge of how to navigate through the menus.

There are only 3 key presses to carry out this operation.

If there is a warning or shutdown present either the red or yellow LED's will be flashing or on solid.

If the fault condition has been removed these warning and /or shutdowns can be cleared in the following way:

1. Press the red STOP key
2. Press and hold the ALARM ACKNOWLEDGE key for 3 seconds
3. Press the ENTER key to clear all warnings and/or shutdowns.

This simple procedure is included in the new Quick start Guide that will be shipped with new units in paper form from August 2006.

The Quick Start Guide is to be released in twenty-five languages to assist the Operator to navigate panel operations such as Start, Stop, Auto and Event Reset.

The Event reset feature is now available on new product.

The new software containing this feature is available from the FG Wilson After Sales Helpdesk for upgrading existing product already in the field in twenty-six languages.
