FOREWORD

Replacement Parts Catalog 302 provides parts ordering information for Series 645 Diesel Engines powering General Motors Marine Propulsion and Generation, Marine Drill Rig, Stationary Generation, Housed and Skid Mounted Generation and Drill Rig Models.

The catalog is divided into four major sections – Alphabetical Index, Table of Contents, Parts Lists, and Numerical Index. The proper use of these sections in the correct sequence permits easy identification of the correct replacement part and its ordering reference.

ALPHABETICAL INDEX

This section is an alphabetical listing of the noun descriptions used to identify replacement parts. Each description is referenced to the parts list number in which it appears. For example:

BEARING .. Carrier insert	A07
BEARING .. Connecting rod	A07
BEARING .. Main - Crankshaft	B18

The applicable parts list for a Connecting Rod Bearing is A07. This parts list number can now be referenced in the table of contents.

TABLE OF CONTENTS

The table of contents is a listing of the parts lists in numerical sequence. Under the general headings of each parts list are detailed subject descriptions, the page on which they appear, and the applicable engine models. For example:

Parts List Number	Subject	Page Number	Engine Application
B26	Camshaft Drive Gear Train		
	Idler Gear Stubshaft Arrangement	1	8,12,16-645E1
	Camshaft Drive Gear Train	2-3	

The idler gear stubshaft in Parts List B26 is on Page 1 for 8,12, and 16-645E1 engines.

Catalog 302 has five specific tables of contents which correspond to different end product applications. These tables of contents and the pages on which they appear are as follows:

Marine Propulsion and Generation	Pages 1-13
Marine Drill Rig	Pages 15-20
Stationary Generation Units	Pages 21-34
Housed Generation and Skid Mounted Units	Pages 35-39
Drill Rig	Pages 41-45

In addition, there is a cross reference list at the beginning of each table of contents (except Marine) relating engine to end product model. The alpha prefix in the parts list number indicates the revision level; "A" being a new parts list, "B," the first revision, "C," the second revision, etc.

PARTS LISTS

Parts lists contain the ordering references for serviceable replacement components of the engine assembly. The method of listing items within a parts list is called the "Indented System." Components of any assembly will have descriptions indented to the right and appear directly beneath the assembly. For example:

Ref. No.	Part Number	Qty. Req.	Description
1	9515339	1	GEAR ASSEMBLY .. Spring drive
2	9515336	1	GEAR ASSEMBLY .. Upper idler - 58 teeth
3	8407341	2	BEARING .. Hub
4	8261101	1	BEARING .. Gear
5	8448310	1	GEAR .. Turbo drive - 70 teeth

The bearings (Ref. Nos. 3 and 4) are components of the idler gear assembly (Ref. No. 2), which is a component of the gear assembly (Ref. No. 1), if the idler gear assembly was ordered, the bearings would be included. This does not mean that all items of an assembly are cataloged. Items which are not considered serviceable are not listed.

from the library of Barrington Diesel Club

Items not identified by a part number in the parts list may be ordered by specifying the following information on the purchase order – catalog number, parts list number, page number, reference number, complete description of the part and the assembly part number of which this item is a component. For example:

Ref. No.	Part Number	Qty. Req.	Description
1	9542965	1	MOTOR ASM. .. Air start - Low pressure
2		1	HOUSING .. Motor - 2-1/2 in. threaded exhaust

Order Quantity 1, Motor Housing, Catalog 302, Parts List B25, Page 22, Reference Number 2, applied to 9542965 Motor Assembly.

Illustrations in the catalog are assigned plate numbers. These plate numbers use the parts list number as a base and then are prefixed with a revision letter and suffixed with a serial number. For example, Plate A26-1 is a new unrevised illustration and is the first plate appearing in Parts List 26. The plate prefix and the parts list prefix may not always match since it is possible to revise one without revising the other.

These illustrations are intended to be used as a visual guide for locating a replacement part. They may not always be an exact representation of your particular equipment.

PARTS LIST HEADINGS

Reference Number – Indicates part number location in the text and corresponds to the part identification in the illustration.

Part Number – Indicates number to be used for ordering purposes.

Quantity Required – Lists total quantity required in that particular application. A dash (-) in this column indicates that the part is not a component of that particular application or assembly, or that optional quantities appear in the description column. "As Required" or its abbreviation in this column indicates the quantity will vary for each application.

Description – Gives a detailed description of the part. Also used for application information, part number change references, part numbers with optional quantities, or part numbers for oversize and undersize replacements. For example:

Ref. No.	Part Number	Qty. Req.		Description
1	8069014	1	-	GEAR .. Crankshaft - 79 teeth - Except 20 cylinder engines
1	8360843	-	1	GEAR .. Cranksahft - 79 teeth - 20 cylinder engines
2	8483087	1	1	SLINGER .. Oil
3	----	A.R.		SHIM .. Oil slinger 8035526 .. .010 thick 8035527 .. .020 thick 8035528 .. .030 thick

In the above example, only components with a quantity listed in the second column would be applicable to 20 cylinder engines. The oil slinger shims (Ref. No. 3) should be ordered in quantity and size as required. Reference numbers 2 and 3 are applicable to all engines.

PART LIST SYMBOLS

Asterisk (*) – Precedes the reference number when the part or its location is not shown in the illustration.

Option (ϕ) – Precedes the reference number when two or more different types of a component have been used in that application. This may be due to design changes, different suppliers, or a part that is applied by customer specification. For example:

Ref. No.	Part Number	Qty. Req.	Description
ϕ10	8534979	2	CORE ASSEMBLY .. Aftercooler (Harrison)
ϕ10	8435460	2	CORE ASSEMBLY .. Aftercooler (Young)
ϕ11	8477713	1	TUBE .. Oil suction - Standard capacity oil pan
ϕ11	8443779	1	TUBE .. Oil suction - Increased capacity oil pan

The option symbol for Ref. No. 10 indicates that either part number may be ordered, since the only difference is the supplier. The option symbol is used for Ref. No. 11 because the customer will have to choose which tube to order based on the type of oil pan on his engine assembly.

from the library of Barrington Diesel Club

Note (ƒ) – Precedes the reference number when additional information regarding the part is located within the parts list in the form of an italicized note. For example:

Ref. No.	Part Number	Qty. Req.	Description
2	9534859	1	GEAR ASSEMBLY .. Upper idler
ƒ3	8407341	2	BEARING .. Hub
ƒ4	8261101	1	BEARING .. Gear

ƒ Replacement bearings must be precision bored after assembly.

Plus (+) – Precedes the reference number when a part listing is not in its primary location, but shown for clarity or reference. For example:

Ref. No.	Part Number	Qty. Req.	Description
+15	9323945	1	DAMPER .. Gear - See Parts List No. B20

The plus symbol in this example was used to show that the gear damper is shown in Parts List B22 for clarity. However, its primary location is in Parts List B20.

NUMERICAL INDEX

Located in the back of the catalog is the numerical index. This is a listing of every part number in the catalog and is sequenced by part number, parts list, page, and reference number. This index is used to find the description, application, or quantity required for a part when only the part number is known.

SPECIAL TABLE OF CONTENTS

Marine Propulsion and Generation

16 and 20-645F7B Engines

NOTE: This is a special table of contents for 16 and 20-645F7B marine engines. Because technical and sales data was not available when the revision to Catalog 302 was being prepared, this supplemental table of contents is furnished to provide the latest parts information for these engines.

Parts List Number	Subject	Page Number	Engine Application
B01	Engine, Crankcase and Oil Pan Assembly		
	16 and 20-645F7B Engine Equipped part numbers are listed below. L indicates left-hand rotation. R indicates right-hand rotation. Part numbers for Crankcase and Oil Pan Assemblies will be provided upon request.		
	Engine Model / Engine Equipped / C/ Case & Oil Pan: L16-645F7B 9557938, R16-645F7B 9557939 } 40017897; L20-645F7B 9557930; R20-645F7B 9557931		
	Crankcase and Oil Pan Assembly	9-12,14	16,20-645F7B - Application same as 16,20-645 engines, except as noted below:
	NOTE: Use 9319169 insert in place of 8268641 and 9318158 elbow in place of 8344765 elbow (Page 9, Ref. No.'s 15 and 16)		
	Lube Oil Level Gauge		
	8335969 .. 16-645F7B engine	12	
	8374643 .. 20-645F7B engine	12

SPECIAL TABLE OF CONTENTS

Stationary Generation Units

NOTE: This is a special table of contents for 12,16-20645E4C and 16,20-645F4B industrial engines. Because technical and sales data was not available when the revision to Catalog 302 was being prepared, this supplemental table of contents is furnished to provide the latest parts information for these engines.

Model Designation	
12-645E4C - S12E4C, SC12E4C 16-645E4C - S16E4C 20-645E4C - S20E4C	16-645F4B - SC16F4B 20-645F4B - SC20F4B

Parts List Number	Subject	Page Number	Engine Application
B01	Engine, Crankcase and Oil Pan Assembly Engines equipped and crankcase and oil pan assembly part numbers are listed below. Part numbers for 12-645E4C, 12-645F4B and 20-645F4B crankcase and oil pan assemblies will be provided on request. CRANKCASE ASSEMBLY .. Engine - Includes Oil Pan

It is essential that the crankcase and oil pan be maintained the same length to assure proper assembly of end housing parts. Therefore, it is recommended that the crankcase be ordered as an assembly of crankcase and oil pan. Refer to Parts List 54 for applicable cylinder head cover frames. Engines delivered after February 1972 have a reduced diameter hardened insert for the water manifold supports located at the crankcase camshaft drive end. This crankcase will only accept the current water manifolds with the reduced diameter flange having an O.D. of 3.370 inches. Therefore, it is recommended that new water manifolds be ordered with the crankcase and oil pan. Refer to Parts List 44 for applicable water manifolds.

# 12	8412532	20	28	36	44	WASHER .. Hardened - Lower main bearing stud nut

Engines produced after May, 1968 apply a hardened washer 8412532 and main bearing nut 8408684 to prevent gouging by the nut. The hardened washer should only be used with the new nut 8408684. The present nut is 1/4 in. shorter and will accommodate the application of the washer. The washer must not be applied with the former castellated nut 8028725 because the nut will extend beyond the end of the stud and not allow engagement of the socket wrench when torqueing in the area of the oil pan suction pipe. The hardened washer should not be applied to a main bearing cap that has been gouged by a nut unless these gouges have been milled from the surface of the main bearing cap. Contact our Service Department for machining tolerances.

CYLINDER HEAD AND LINER

8,12,16,20-645 Engines

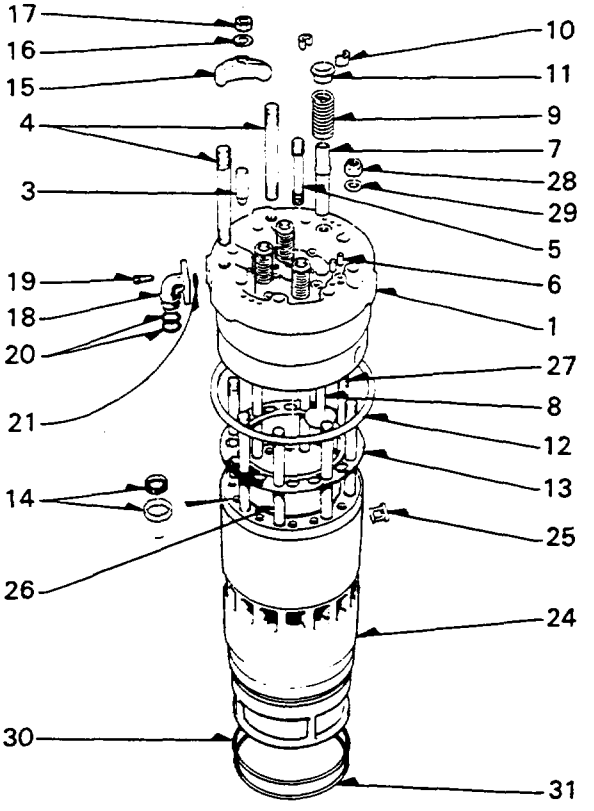

PLATE B06-1

Ref. No.	Part Number	Qty. Req.	Description
			Quantities listed are for one cylinder head and one cylinder liner.
1	9319736	1	HEAD ASM. .. Cylinder - With 9319735 valves - Replaces 9319456 and 8424464
*2	9319455	1	HEAD ASM. .. Cylinder - Without valves - Replaces 8424450
			Current design changed flow heavy flanged heads can be identified by a number four (4) cast 3/4 inch high and raised in a diamond shaped border (◇4◇). Previous change flow design heads had the numbers 3, 4, 5 or 6 enclosed in an 1-1/8 inch diameter recessed circle (③, ④, ⑤, ⑥) or ◇3◇. This identification is found on the top face of the flange at the 7 o'clock position.

Complete, Mini, And Partial Power Pack Assemblies
Not Illustrated

COMPLETE POWER PACK ASSEMBLIES

The complete power pack assembly consists of the cylinder head assembly, cylinder liner, piston assembly, carrier assembly, connecting rod assembly, and all necessary gaskets and seals. All components are pre-assembled and packaged in an expendable or storage container. The cylinder head seat ring (see P.L. B06) and connecting rod bearings (see P.L. A07) are not included in the power pack assembly.

POWER PACK ASSEMBLIES

MINI AND PARTIAL POWER PACK ASSEMBLIES

A Mini Power Pack is the same as a Complete Power Pack less the connecting rod.

A Partial Power Pack is the same as a Mini Power Pack less the carrier, insert bearing, piston pin and bolt assembly, thrust washer, and snap ring.

Mini and Partial Power Packs are not offered on a unit exchange basis.

INJECTOR CONTROL LINKAGE
Two-Piece Control Shaft Kits
For 16 and 20-645 Engines

Not Illustrated

As a service option to the one-piece injector control shafts shown on Page 1, two-piece control shaft kits are available for 16 and 20-cylinder engines. These kits eliminate the need for removal of the cylinder head cover support frames when replacement is required.

/ Spring Drive Gears have replaced Solid Drive Gears except for certain marine propulsion applications (Refer to Marine Pointers 3M-81). Also, Friction Drive Gears are no longer available since the Ratchet Clutch Turbocharger has been discontinued. All Ratchet Clutch Turbochargers returned to E.M.D. for rebuild will be converted to the Roller Clutch design. The Solid or Spring Drive Gear should be ordered as a replacement for the Friction Drive Gear whenever a Roller Clutch Turbocharger is applied.

This conversion will require drilling and tapping additional mounting holes and the application of the newer design Thrust Plate and Mounting Hardware (Ref. Nos. 8,9,10,11,12). Refer to M.I. 9587 (Rev. A).*

Replacement Bearings must be applied with a heat shrink press fit.

† The center drive gear on lube oil pressure pumps 8252844 and 8360554 was formerly keyed to the drive shaft. Due to a change in design, the center drive gear is now attached to the rear drive gear by the use of two slotted spring pins. In addition, the center gear keyway on the drive shaft has been removed. If this new driveshaft (part numbers 9330010 for 16 cyl. pump and 9330011 for 20 cyl. pump) is to be used with the earlier design rear and center drive gears, these gears will have to be drilled to accept the required pins. Contact our Service Department for details regarding this modification. 8252844 and 8360544 pumps sent in on a unit exchange basis will be remanufactured to include the new design components.

The governors listed above are all variations of a basic UG-8 governor, and most of their components are identical. Accordingly, the parts lists for these governors have been consolidated as much as possible for easier part number identification. When individual governors require differing components, it will be noted in the description column.

Ratchet Clutch Turbocharger Reference Chart

Standard Height Exhaust Duct

Ratchet clutch turbochargers, previously furnished on marine and some industrial engines, are no longer available. When replacement is necessary, it is advised to use the corresponding roller clutch turbocharger. The original replacement roller clutch turbochargers for marine engines, as indicated by the (ǂ) symbol below have been replaced by the fuel efficient "EB" design turbochargers. See the reference chart for roller clutch turbochargers - standard height exhaust duct for the appropriate part numbers. All ratchet clutch turbochargers returned to Electro-Motive for remanufacture will be converted to the latest roller clutch design. Unit exchange turbocharger part numbers include the change out gasket kits.

† All current production 16 and 20 cylinder engine turbocharger aftercoolers have 1 inch support dowels and mating tapping pads 8399695. Previously, aftercoolers had 5/8 inch support dowels and tapping pads 8282175. It is recommended, if aftercoolers having these 5/8 inch support dowels are removed for cleaning, that these 5/8 dowels be replaced with stepdown support dowel 5/8 inch to 1 inch and that tapping pad 8282175 be replaced with 8399695. Inner cover 8357354 has been redesigned for 1 inch dowels 8399786. When ordering new or unit exchange aftercoolers, tapping pad 8399695 is included.

ENGINE AIR INTAKE SILENCERS AND ADAPTERS

Air Intake Adapter and Mounting
8-645E2,E6 Marine Engines

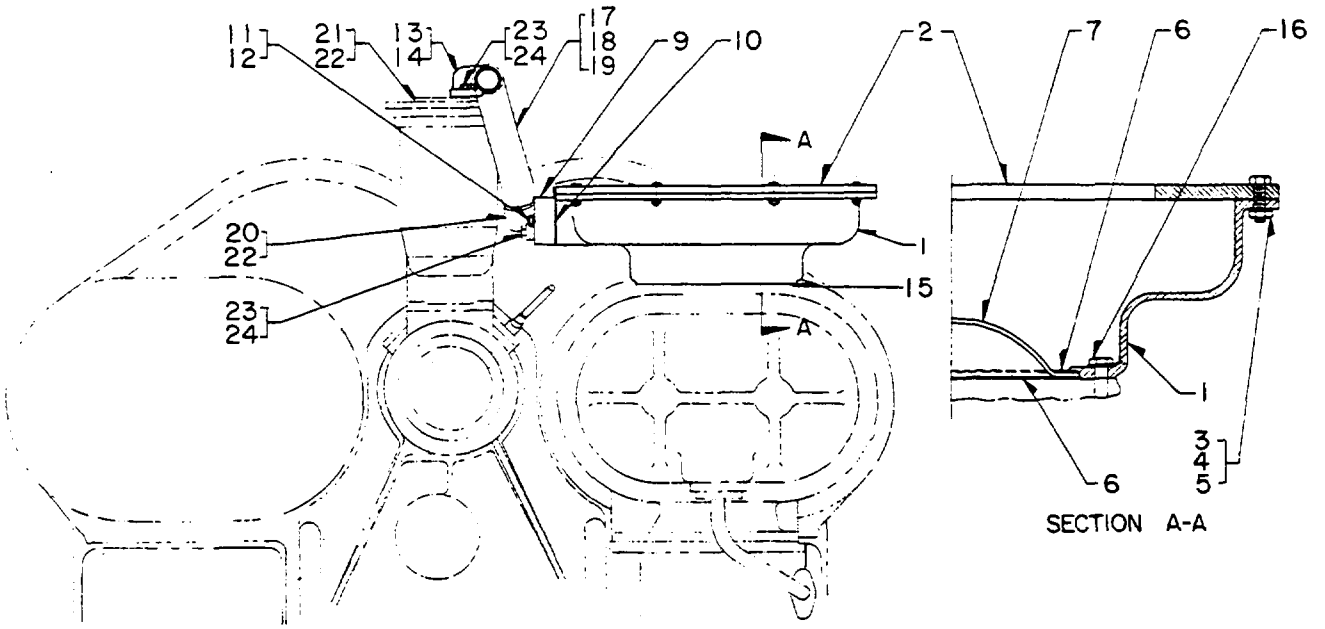

PLATE A78-1

Ref. No.	Part Number	Qty. Req.	Description
1	3266200	1	ADAPTER .. Blower housing - Replaces 8070169
2	3317178	1	PLATE .. Adapter air intake
3	181374	8	BOLT .. 3/8 - 24 x 1-1/2 hex. head
4	103321	8	WASHER .. Lock - 3/8
5	103026	8	NUT .. 3/8 - 24 hex.
6	8059565	2	SPACER .. Adapter
7	8055154	1	SCREEN .. Adapter
8	6101229	10	WASHER .. Plain - 1/2
9	8218452	1	ADAPTER .. Flange
10	8070199	1	GASKET .. Adapter
11	179848	2	BOLT .. 3/8 - 16 x 2-1/4 hex. head
12	103321	2	WASHER .. Lock - 3/8
ϕ13	8165250	1	FLANGE ASM. .. Adapter to oil separator
ϕ14	8243790	1	ELBOW .. Flanged - Adapter to oil separator
15	8024287	1	GASKET .. Filter adapter to blower
16	179885	10	BOLT .. 1/2 - 13 x 1-1/2 hex. head
17	8040167	1	HOSE .. Oil separator to filter adapter - 36 in. long - Use 18 in. long - Replaces 8131113
18	8131112	1	SPRING .. Hose
19	8374760	2	CLAMP .. Hose - Replaces 8132042
20	8084420	1	ELBOW .. Flanged
21	8048967	1	FLANGE .. Blind
22	8084407	3	GASKET .. Elbow to adapter
23	181433	6	BOLT .. Flanged elbow mounting - 1/2 - 20 x 1-3/4 hex. head
24	6101229	6	WASHER .. Plain - 1/2
*25	9537542	1	CONNECTOR .. 1/8 - 27 F.P.T.
*26	9331510	1	INDICATOR .. Pressure - Mechanical
