

PARTS BULLETIN

Original Issue Date: **3/04**

Models: **Weather and Sound Housings Equipped With Lockable Latches**

Market: **Industrial**

Subject: **Discontinued Lockable Latches**

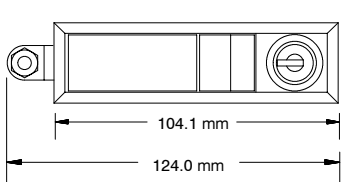

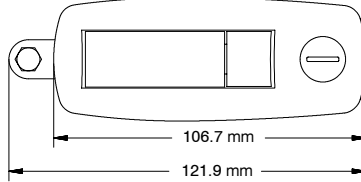

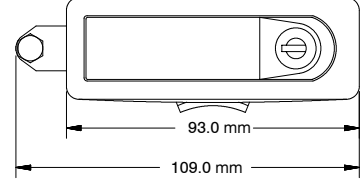

The lockable latches used on weather and sound housings changed to a smaller latch effective September 17, 2003. The discontinued latches are superseded to latch adapter kits that include an adapter plate to install the smaller new latch into the existing mounting hole.

When using KOHLERnet to determine housing bills of material, use the generator set *build date* as the *BOM Valid From Date* to display the part number of the latch

used to build the housing. If you use the default current date as the *BOM Valid From Date*, the latches used on units built today will be displayed, and the new latches are not a direct replacement for the discontinued latches. If build date is unclear or you do not have KOHLERnet access, use the information in the tables below to identify existing and replacement latches.

When replacing the latch contained in the latch replacement kit, order the new smaller latch.
